

ABSTRACT

In a first aspect, a first method is provided for self-adjusting allocation of memory bandwidth in a network processor system. The first method includes the steps of

- 5 (1) determining an amount of memory bandwidth of a network processor used by each of a plurality of data types; and
- (2) dynamically adjusting the amount of memory bandwidth allocated to at least one of the plurality of data types based on the determination. Numerous other aspects are
- 10 provided.
